Section-003

HW #4

1) $\text{Page Size} = 256 = 2^8 \rightarrow$

→ FCC5 physical address

→ A31C physical address

→ ESA3 physical address

→ FC17 physical address

$2^{12} = \text{page size}$
 $2^2 \times 2^{10} = \boxed{4 \text{ KB}}$

Fourth level $\rightarrow 2^9 \times 2^{12} = 2^{21} = 2 \times 2^{20} = 2 \text{ MB}$

$32 \text{ MB} / 2 \text{ MB} = 16$ fourth level page tables required to map.

$16 \times 2^9 \times 2^3 = 2^{4+9+3} = 2^6 \times 2^{10} = \underline{64 \text{ KB}} \rightarrow \text{fourth level}$
 $1 \times 2^9 \times 2^3 = 2^{10} \times 2^2 = \underline{4 \text{ KB}} \rightarrow \text{third level}$
 $1 \times 2^9 \times 2^3 = 2^{10} \times 2^2 = \underline{4 \text{ KB}} \rightarrow \text{second level}$
 $1 \times 2^9 \times 2^3 = 2^{10} \times 2^2 = \underline{4 \text{ KB}} \rightarrow \text{first level}$

$64 + 4 + 4 + 4 = 76 \text{ KB}$
RAM is enough

3)

40, 30, 60, 10, 80, 45
 40, 60, 10, 80, 30, 45
 40, 60, 10, 30, 80, 45
 40, 60, 30, 10, 80, 45
 60, 10, 40, 30, 80, 45
 60, 10, 40, 80, 30, 45
 60, 10, 80, 40, 30, 45
 60, 40, 30, 10, 80, 45
 60, 40, 10, 30, 80, 45
 60, 40, 10, 80, 30, 45

Considering there may be
 context switches.

4)

sem mutex = 1;
 Sem tobaccoSem, paperSem, notchSem = 0;

Agent (i)
 do {

wait(mutex);
 put 2 random;
 signal(mutex);
 if (random = tobacco & paper)
 signal(notchSem);
 else if (random = tobacco & notch)
 signal(paperSem);
 else
 signal(tobaccoSem);

} while (1);

}

TobaccoMan() {

do {

wait(mutex);
 wait(tobaccoSem);
 take from table;
 signal(mutex);
 Smoke

} while (1);

}

NotchMan() {

do {

wait(mutex);
 wait(notchSem);
 take from table;
 signal(mutex);
 Smoke

} while (1);

}

PaperMan() {

do {

wait(mutex);
 wait(paperSem);
 take from table;
 signal(mutex);
 Smoke

} while (1);

}

6) a) Segment 0 \rightarrow 1024

$$1024 + 50 = \underbrace{64 \times 16}_{\text{page size}} + 50$$

page size \rightarrow page i

$$64 \times (\underbrace{16 + 10}_{\text{frame}}) + 50 = \boxed{1714}$$

b) Segment 1 \rightarrow 4196 + 0 = 65 \times 64 + 36

$$\begin{array}{l} +10 \\ \hline = 75 \times 64 + 36 = \boxed{4836} \end{array}$$

c) Segment 1 \rightarrow 4196 + 100 = 4296 = 67 \times 64 + 8

$$\begin{array}{l} \downarrow +10 \\ \Rightarrow 77 \times 64 + 8 = \boxed{4936} \end{array}$$

d) Segment 1 \rightarrow 4196 + 700

problem because
Segment 1 has 512 length
which is less than 700.
Out of the boundary.

e) Segment 2 \rightarrow 128 + 10 = 2 \times 64 + 10

$$\begin{array}{l} \downarrow +10 \\ \Rightarrow 12 \times 64 + 10 = \boxed{778} \end{array}$$

f) Segment 3 \rightarrow 2048 + 200 = 2248 = 35 \times 64 + 8

$$\begin{array}{l} \downarrow +10 \\ = 45 \times 64 + 8 = \boxed{2898} \end{array}$$

7)

Existing

A	B	C
9	6	6

Available

A	B	C
2	1	0

Need

4	2	1
2	1	1
4	4	2
2	2	0
2	1	2

State is not safe because none of the processes can be executed.

8)

Available

A	B	C
3	3	0

After executing P₄ and P₁ no other process can be executed so deadlock.

P₄ → 4 3 1P₁ → 5 3 1

9)

monitor Semaphore

{

int count;

condition c;

void initialize(int N) {

count = N;

}

void wait() {

if (count == 0)

c.wait();

count --;

}

void signal() {

count ++;

c.signal();

}

}
